

This document should contain no explicit references to the author/s of the manuscript, in order to preserve authorial anonymity for the purposes of the external peer review. All identifying references negate the system of blind evaluation.

TITLE PAGE

Title of the article in English: 80 characters maximum including spaces.

- Concise and informative, in Spanish on the first line, and in English on the second line, including as many significant terms as possible.
- Maximum of two lines accepted.

Title of the article in Spanish: 80 characters maximum including spaces.

- Take particular care of the linguistic quality of the text.

Abstract in English: 100-150 words.

- Include a concise description of the reason and purpose of the research project, the methodology used, key findings and main conclusions, following the structure: justification of the subject, goals, study methodology, results and conclusions.
- It should be written in an impersonal style: «This study analyzes...».

Abstract in Spanish: 100-150 words.

- Take particular care of the linguistic quality of the text.

Keywords (in English) (5 terms).

- Use single words and standardised terms if possible.

Keywords (in Spanish) (5 terms).

- Take particular care of the linguistic quality of the text.

BODY

Introduction

- Justification, motivation and structure of the article.

Literature review

- The scientific context, using bibliographical references if they are strictly necessary.

Methodology

- Presented with precisión, giving details of the possible procedures and means used.
- If required, the sample and sampling methods should be described, and reference to the type of statistical analysis employed will be made too.
- If the methodology is original, reasons must be provided to justify this usage and its possible limitations described.

Results

- Results should follow a logical sequence in the text; tables and figures can be included although only if absolutely necessary and providing they do not repeat the same data included in the main body of the text.
- The most important observations should be highlighted, describing findings made with the material and methods used but without interpreting them or making value judgements.
- A table or figure should never appear without reference to it in the text prior to it. And they always have to carry below it, the number, the title and the source.

Conclusions

- This section should summarize the findings, relating the observations made in this respect with other relevant studies, signaling contributions and limitations, without reiterating data discussed previously in other sections. Inferences from the findings should be mentioned along with their limitations, including deductions for future research, and the conclusions should be linked with the study aims, avoiding gratuitous statements and conclusions not supported fully by the research data.

Notes

- Notes must not include simple bibliographic citations (without comments), since these should be included in the references section..

References

- Bibliographic citations must be included as references to the text.
- The bibliography should not include any references not cited in the text.
- The number of references must be sufficient and necessary, presented alphabetically by the author's surname.
- Bibliographic citations must be taken from the original documents - preferably journals and to a lesser extent books - always indicating the initial and final page of the article or work from which they have been taken, except for complete works.
- Given the importance of citations for indexation purposes and calculations of impact factors, correct citation will be assessed in accordance with these strict standards, valuing the inclusion not only of national but also international references, and especially in English.
